XKWISIT

SERVICES INTERNATIONAL

BUSINESS GROWTH & MARKET EXPANSION STRATEGY

A research-led commercial strategy for building a stronger, more focused and more profitable business.

THE STRATEGIC INTENT

Move XKWISIT beyond being perceived as a generalist service provider. Build a clear commercial proposition, sell measurable business outcomes, create repeatable acquisition systems, and grow through proof, partnerships and recurring client relationships.

Prepared: 7 November 2026 | Primary market lens: Nigeria, with regional and international expansion pathways

Research note: Public market evidence is combined with strategic recommendations. Recommendations are hypotheses to validate through XKWISIT's own sales data and customer interviews; no commercial outcome is guaranteed.

CONTENTS

- 1. Executive direction
- 2. What the market evidence says
- 3. The strategic problem XKWISIT must solve
- 4. Positioning and ideal customer profiles
- 5. Service architecture: sell outcomes, not a menu
- 6. The XKWISIT Growth OS delivery system
- 7. Customer acquisition engine
- 8. Sales conversion and commercial discipline
- 9. Retention, expansion and recurring revenue
- 10. Authority, proof and brand strategy
- 11. Operating model, people and delivery quality
- 12. 90-day execution roadmap
- 13. KPI dashboard and management cadence
- 14. Illustrative commercial model
- 15. Risks, assumptions and validation plan
- 16. Sources and research notes

How to use this document

Treat this as a decision document, not a promise of results. Start with the first 90-day priorities, measure each experiment, and keep or expand only what produces qualified opportunities, profitable delivery or stronger retention. The market statistics describe the broader environment; they do not prove that every Nigerian business is ready or able to buy XKWISIT's services.

1. EXECUTIVE DIRECTION

XKWISIT should operate as a **technology and business growth partner** for organisations that need to improve how they attract customers, convert demand, operate and scale. The business should not lead with a long list of unrelated services. It should lead with a defined business problem, a diagnostic process, a measurable intervention and evidence of the outcome.

The commercial opportunity is to connect capabilities that clients often buy separately: strategy, brand, digital products, acquisition, automation and analytics. The advantage is not simply having five divisions. The advantage is being able to identify the commercial bottleneck, select the right combination of capabilities and manage the work against a shared outcome.

Strategic recommendation

Focus the first growth phase on a small number of customer segments and flagship offers. Keep the five divisions as delivery capabilities, but package them into three client-facing solutions: (1) Digital Business Foundation, (2) Demand & Revenue Growth, and (3) Digital Product & Process Transformation. This makes buying easier and reduces the risk of presenting XKWISIT as an agency that does everything for everyone.

What success should look like

- **Commercial clarity:** a buyer can understand who XKWISIT helps, what problem it solves, how the engagement works and what evidence supports the offer.
- **Predictable pipeline:** opportunities come from targeted outbound, referrals, partnerships, inbound authority and carefully selected tenders—not social posting alone.
- **Profitable delivery:** every engagement has scope, owner, timeline, acceptance criteria, margin target and change-control rules.
- **Recurring relationships:** clients continue through optimisation, analytics, maintenance, experimentation and growth retainers where ongoing value exists.
- **Proof-led expansion:** case studies, benchmarks and client outcomes create a reason to trust XKWISIT in larger and more complex engagements.

Important distinction

A strategy cannot honestly be described as one that will *definitely* produce a specific result. Market conditions, offer-market fit, pricing, execution quality, client budgets and sales discipline all affect outcomes. This plan is designed to improve the odds by using testable hypotheses, measurable targets and explicit decision gates.

2. WHAT THE MARKET EVIDENCE SAYS

The available evidence supports a real need for digital capability among Nigerian businesses, but it also warns against assuming that every small business is a suitable buyer for a sophisticated multi-service engagement.

Evidence	What it indicates	Strategic implication for XKWISIT
PwC Nigeria MSME Survey 2024	The survey covered 557 MSME operators across 13 sectors and 29 states; fieldwork was conducted online in 2022. The report says MSMEs are central to Nigeria's economy.	Use the report as a directional view of MSME needs, not as a census of all current businesses. Prioritise businesses with capacity and urgency to invest.
Digital channel use in PwC survey	WhatsApp Business 23%, Facebook 19%, Instagram 15%, email marketing 10%, Twitter/X 9%, online store 7%.	Many firms already communicate digitally but may lack an integrated sales system. Sell conversion, follow-up, measurement and operational improvements—not just posting.
Digital relevance in PwC survey	54% called social media/digitisation very relevant and 16% relevant to their business strategy.	There is stated interest, but interest is not purchase intent. XKWISIT must prove financial or operational value and qualify budget.
DataReportal Digital 2026: Nigeria	109 million internet users and 47.8 million social media user identities at end of 2025. The report warns social identities are not necessarily unique individuals.	Digital channels provide reach, but reach is not demand. Use platform data as context, then measure qualified leads and revenue.
SMEDAN/NBS 2020 MSME survey, reported by PwC	MSMEs accounted for 46.32% of GDP, 96.9% of businesses and 87.9% of employment in the cited survey.	The addressable business universe is broad, but the micro-enterprise majority is not automatically the right customer for higher-value consulting and engineering.
World Bank MSME market characteristics	A World Bank document describes Nigeria's MSME base as dominated by micro-enterprises, with formalisation and access to finance constraints.	Build distinct offers for micro firms versus established SMEs and mid-market companies. Avoid spending enterprise sales effort on buyers unable to fund delivery.

Interpretation: the strongest strategic opening is not 'businesses need social media'. It is that many businesses have fragmented digital touchpoints and need help connecting attention to enquiry, enquiry to sale, and sale to repeat purchase. That proposition is more valuable—and more defensible—than generic content management.

Market limitations

- The PwC survey was fielded online in 2022 and published in 2024. It is useful evidence, but it is not a live 2026 buying-intent survey.
- DataReportal's social-media figures are user identities and may not equal unique people or active buyers.
- Public data does not establish XKWISIT's obtainable market, conversion rates, average contract value or competitor win rates.
- XKWISIT must conduct its own primary research: buyer interviews, lost-deal reviews, pricing tests and analysis of sales-cycle duration.

3. THE STRATEGIC PROBLEM XKWISIT MUST SOLVE

A broad capability set can become a commercial weakness when buyers cannot quickly identify the primary value. A prospective client who sees branding, websites, software, AI, marketing, content, analytics and operations in one undifferentiated list may compare XKWISIT with low-cost vendors on price alone.

The key strategic shift

From: We provide branding, software, digital marketing, AI, content and analytics.
To: We identify where your business is losing growth, then design and implement the systems needed to improve acquisition, conversion, customer experience and operational performance.

Five constraints to address

Constraint	Commercial consequence	Response
Too many services presented equally	Prospects struggle to understand the primary offer and may default to price comparison.	Lead with 2–3 packaged outcomes; keep specialist services as modules.
Weak or generic proof	Buyers cannot distinguish claims from demonstrated capability.	Publish case studies with baseline, intervention, timeframe, measured result and client context.
Unqualified lead generation	Time is spent on prospects without budget, urgency or decision authority.	Use a qualification score and discovery process before proposals.
Project-only revenue	Revenue can become volatile and teams repeatedly restart acquisition.	Design ethical post-project retainers tied to ongoing optimisation, support and measurement.
Founder-dependent delivery and sales	Capacity and consistency are limited by one person's availability.	Document sales, delivery, QA, client communication and reporting processes.

The growth equation

Revenue growth = qualified opportunities × win rate × average contract value × repeat/expansion revenue. Each variable has a different lever. More posting may improve awareness, but it does not automatically improve qualification, close rate, project margin or repeat purchase.

4. POSITIONING AND IDEAL CUSTOMER PROFILES

XKWISIT should not target every Nigerian business at the same time. Start with segments where the problem is costly, the decision-maker is reachable, the business can fund a solution and XKWISIT can show credible proof.

Priority segment	Typical trigger / pain	Likely buyer	Best entry offer
Established service businesses	Enquiries are inconsistent; leads are not followed up; brand and website do not convert; operations depend on manual work.	Founder, CEO, commercial lead, operations lead.	Growth & Conversion Diagnostic
Retail, distribution and commerce	Orders arrive through multiple channels; inventory, customer data and follow-up are fragmented; online sales experience is weak.	Founder, head of sales, e-commerce manager.	Commerce & Customer Journey Upgrade
Property, hospitality and experience businesses	Trust barriers, slow enquiries, booking friction, poor listing presentation, fragmented customer communication.	Founder, GM, sales/marketing lead.	Digital Demand & Booking System
Education and professional services	Lead generation is inconsistent; service delivery and learning/client journeys need digital systems.	Founder, director, programme lead.	Digital Experience & Enrolment System
Funded startups and mid-market firms	Need product engineering, integrations, analytics, automation or growth experimentation.	CEO, CTO, COO, product/growth lead.	Product & Process Transformation

Qualification score: score each prospect from 0 to 2 on the six dimensions below. Pursue actively when the total is 9 or more out of 12; nurture at 6–8; deprioritise below 6 unless there is a strategic reason.

Dimension	0	1	2
Problem severity	Unclear / low	Recognised inconvenience	Measurable loss or urgent need
Budget	No budget	Budget uncertain / staged	Budget identified
Decision access	No access	Influencer only	Decision-maker engaged
Timing	No timeline	3–6 months	Within 90 days
Fit	Outside capability	Partial fit	Strong fit
Proof potential	No measurable outcome	Some indicators	Baseline and outcome measurable

Primary research to complete in the first 30 days

1. Interview 12–15 business owners or decision-makers across the priority segments. Ask what growth or operational problem they have tried to solve, what it costs them, what they have already paid for, why previous solutions failed and what would make them buy now.
2. Review the last 10 inbound enquiries, proposals and lost opportunities. Record source, segment, requested service, budget, objection, response time, sales-cycle length and outcome.
3. Interview 5 former or current clients. Ask what they value most, what nearly stopped them buying, what results they can verify and what they would pay to improve next.

4. Run 3 offer tests with clear landing pages or one-page proposals. Compare qualified meeting rate and paid diagnostic conversion—not likes or impressions.
5. Build a competitor map of 15 relevant firms: target segment, positioning, proof, offer structure, pricing transparency, delivery model and visible differentiation. Do not assume competitor prices unless publicly disclosed.

5. SERVICE ARCHITECTURE: SELL OUTCOMES, NOT A MENU

The five divisions should remain the internal capability structure. Externally, group them into three clear commercial offers. This reduces buyer complexity while preserving cross-functional delivery.

Offer A — Digital Business Foundation

For: established businesses whose digital presence and customer journey are fragmented or unconvincing.
Problem: customers cannot easily understand, trust, find or transact with the business.
Includes: positioning, brand system, website or landing experience, conversion-focused copy, analytics setup, contact/lead capture and core CRM or workflow configuration.
Deliverable: a coherent digital front door with measurable enquiry actions.

Offer B — Demand & Revenue Growth

For: businesses with a validated product/service and some demand, but inconsistent acquisition or weak conversion.
Problem: marketing activity is not connected to sales outcomes.
Includes: customer and competitor research, offer refinement, channel strategy, campaign design, SEO/search foundations, paid media testing where budget exists, landing-page optimisation, CRM follow-up, email/WhatsApp lifecycle flows and reporting.
Deliverable: a measurable acquisition-to-conversion system.

Offer C — Digital Product & Process Transformation

For: funded startups and established organisations with complex product, workflow or data needs.
Problem: manual processes, disconnected systems, poor user experience or inability to scale service delivery.
Includes: discovery, product strategy, UX, software engineering, integrations, automation, AI-assisted workflows where justified, analytics and ongoing technical support.
Deliverable: a fit-for-purpose digital product or operational system with adoption and performance measures.

Capability division	Role in the offer architecture
Technology & Product Engineering	Web/mobile products, integrations, platforms, internal tools and technical foundations.
Business Growth & Digital Marketing	Research, positioning, acquisition, conversion, lifecycle and revenue optimisation.
Branding & Creative	Brand strategy, identity, messaging, design systems and sales assets.
AI, Content & Creative Technology	Automation, AI-enabled workflows, content systems and creative production technology.
Business Intelligence & Data	Measurement plans, dashboards, reporting, customer insight and decision support.

Packaging rules

- Every proposal starts with the business problem and desired outcome, not a list of tasks.
- Separate strategy/discovery fees from implementation fees where discovery is substantial.
- Define scope, exclusions, client responsibilities, milestones, acceptance criteria and change-request pricing.
- Use a paid diagnostic as the first step for complex or poorly defined problems. Do not give away a full strategy in a free sales call.
- Never promise revenue, rankings, viral reach or a fixed number of leads unless the contract defines the conditions and the evidence supports the claim.

6. THE XKWISIT GROWTH OS DELIVERY SYSTEM

Use one repeatable operating method across service lines. It creates consistency, makes delivery easier to explain and creates natural opportunities for ongoing work.

Stage	Core activities	Client output / decision gate
1. Diagnose	Stakeholder interviews, customer journey review, analytics audit, competitor review, process mapping and commercial baseline.	Prioritised problem statement, baseline metrics, opportunity map and recommended scope.
2. Position	ICP, value proposition, offer, messaging, pricing logic and proof strategy.	Approved positioning, target segment, offer and success measures.
3. Build	Brand, website, product, campaign assets, integrations, automation or analytics implementation.	Working deliverables that pass agreed QA and acceptance criteria.
4. Acquire	Channel selection, targeted outreach, SEO, partnerships, paid tests and authority content.	Qualified traffic, conversations and opportunities by source.
5. Convert	Landing pages, sales process, proposal, CRM stages, follow-up and objection handling.	Improved enquiry-to-meeting and proposal-to-win performance.
6. Retain	Onboarding, customer success, support, reporting, lifecycle messaging and service reviews.	Adoption, satisfaction, renewal and expansion opportunities.
7. Optimize	Experiment backlog, cohort analysis, margin review, channel reallocation and product improvements.	Quarterly optimisation roadmap and investment decisions.

Make diagnosis a paid product

Create a structured XKWISIT Growth Diagnostic. It should assess: (1) market and customer clarity, (2) offer and pricing, (3) brand trust, (4) acquisition channels, (5) conversion and sales process, (6) customer retention, (7) operations and automation, and (8) data and reporting. Deliver a concise scorecard, top five constraints, quantified opportunities where evidence permits, and a 90-day action plan.

The diagnostic should be sold as a fixed-scope engagement. Credit part of the diagnostic fee toward a larger implementation only when commercially sensible and stated in advance.

7. CUSTOMER ACQUISITION ENGINE

Build a multi-channel pipeline, but assign each channel a job. The objective is not maximum activity; it is a repeatable flow of qualified conversations with decision-makers.

Channel	Job to perform	Execution standard	Primary metric
Account-based outbound	Reach businesses with visible problems and relevant buying triggers.	Build a researched list; contact a named decision-maker with one specific observation and a useful next step.	Positive reply and qualified meeting rate
Referral partners	Borrow trust and access established networks.	Develop relationships with accountants, legal firms, business consultants, industry associations, software vendors and investors.	Qualified introductions and closed revenue
Proof-led inbound	Help buyers discover and evaluate XKWISIT.	Publish case studies, diagnostic insights, teardown analyses, practical guides and outcome-led landing pages.	Qualified inbound leads
Strategic partnerships	Access a concentrated group of potential buyers.	Co-host briefings, workshops and sector-specific clinics with associations, communities and complementary providers.	Partner-sourced opportunities
Tenders and institutional sales	Pursue larger scoped opportunities where capability and compliance fit.	Monitor relevant procurement notices, maintain a bid library and qualify opportunity economics before responding.	Qualified bids, win rate and gross margin
Paid acquisition	Accelerate a proven offer or retarget high-intent audiences.	Only scale after offer, landing page, sales follow-up and tracking are functional.	Cost per qualified opportunity and CAC

Recommended first 90-day channel mix

- **Primary:** founder-led account-based outreach to 2 selected verticals, supported by referral introductions.
- **Secondary:** LinkedIn authority and a website built around the three flagship offers, with proof and a clear diagnostic CTA.
- **Selective:** sector-specific workshops and partner sessions. One useful session for a tightly defined audience is preferable to a broad webinar with no follow-up process.
- **Later:** paid campaigns only after the team can demonstrate conversion from qualified lead to paid engagement.

A practical weekly outbound system

Activity	Weekly starting target	Quality control
New accounts researched	30–40	Each account must match an ICP and show a relevant trigger.
Personalised first contacts	25–30	One decision-maker; one business-specific observation; one clear CTA.
Follow-up touches	40–60	Use a respectful sequence across email, LinkedIn or phone where appropriate; stop when asked.
Discovery calls	3–5	Only count calls with a relevant buyer and a defined business issue.
Proposals / diagnostic offers	1–3	Send only after qualification and discovery.
Partner conversations	2	Ask for a specific introduction pathway or co-delivery opportunity.

These are initial operating targets, not market benchmarks or guaranteed conversion outcomes. Recalibrate after four weeks using XKWISIT's own data.

Example outreach structure

Subject: A specific growth opportunity for [Company]

Hello [Name],
I noticed [specific, verifiable observation about the business or customer journey]. For businesses in [sector], this can sometimes create friction around [relevant outcome].

XKWISIT works across business growth and technology. I have a few ideas worth validating for [Company], particularly around [one specific opportunity]. Would a 20-minute conversation next week be useful?

Regards,
[Name]

8. SALES CONVERSION AND COMMERCIAL DISCIPLINE

A lead-generation system is incomplete without a consistent way to qualify, diagnose, propose, negotiate and close. Every opportunity should move through a visible pipeline with a next action and an owner.

CRM stage	Exit condition	Required data
Target account	Fits an ICP and has a plausible trigger.	Sector, size proxy, location, decision-maker, evidence of need.
Contacted	Personalised first touch sent.	Channel, date, message, next follow-up.
Engaged	Prospect replies or accepts a conversation.	Need, interest, objections, timing.
Discovery qualified	Problem, authority, budget path and timing are understood.	Problem statement, impact, stakeholders, budget range.
Diagnostic / proposal	Scope, outcomes, timeline and commercial terms sent.	Proposal value, expected margin, decision date.
Negotiation	Commercial or scope details being resolved.	Objections, concessions, risks, next step.
Won / lost	Signed agreement and initial payment, or documented loss reason.	Contract value, payment terms, source, loss reason.
Delivery / expansion	Project accepted and ongoing value reviewed.	Margin, client health, outcomes, renewal potential.

Discovery call structure

1. Context: What does the business sell, to whom, and what are its current growth priorities?
2. Problem: What is not working? Where does the customer journey or internal process break?
3. Impact: What does the problem cost in lost sales, time, margin, customer experience or risk?
4. Previous attempts: What has been tried? What worked or failed, and why?
5. Desired outcome: What would materially improve in the next 90–180 days?
6. Buying process: Who decides, what budget route exists, what is the timeline and what alternatives are being considered?
7. Next step: Recommend a paid diagnostic, a scoped proposal or no proposal. State why.

Proposal format

- Executive summary: the client's problem in the client's language.
- Baseline and evidence: what is known, what is assumed and what still needs validation.
- Recommended approach: phases, deliverables and why this approach fits.
- Success measures: baseline, target, measurement source and review date.
- Timeline and dependencies: client inputs, approvals, access and milestones.
- Investment and payment schedule: fees, taxes where applicable, third-party costs and validity period.
- Scope boundaries: exclusions, change control, support period, ownership and acceptance criteria.
- Relevant proof: similar work, team capability and references where permission exists.

Commercial safeguards

- Collect an upfront mobilisation payment before work begins; use milestone payments for larger projects.
- Do not start implementation while requirements, access, decision authority or acceptance criteria remain materially unclear.
- Track gross margin per project, including subcontractor, software, hosting, production and rework costs.
- Record discount reasons and never discount without reducing scope, changing terms or gaining a strategic benefit.
- Use written change requests for work outside scope.

9. RETENTION, EXPANSION AND RECURRING REVENUE

The business should not force every client into a retainer. Recurring revenue is justified when the client has recurring needs and XKWISIT can deliver ongoing value that is visible and measurable.

Potential recurring engagements

Engagement	Ongoing value	Review metrics
Growth optimisation	Monthly experiment planning, landing-page tests, channel review, campaign optimisation and sales-funnel improvements.	Qualified leads, conversion rates, CAC where measurable, pipeline value.
Product care and enhancement	Maintenance, security updates, monitoring, small improvements, integrations and product roadmap support.	Uptime, incident response, release quality, adoption, backlog health.
Data and business intelligence	Dashboard maintenance, data quality, management reporting and decision support.	Reporting reliability, data completeness, time-to-insight, decisions supported.
Lifecycle and CRM operations	Lead follow-up, onboarding, retention messaging, workflow automation and CRM hygiene.	Lead response time, follow-up completion, repeat purchase, churn.
Brand and content systems	Campaign asset production, brand governance and ongoing content systems.	Asset turnaround, consistency, campaign contribution, qualified engagement.

Client success rhythm

- **Day 0–7:** structured onboarding, access, stakeholders, baseline and communication protocol.
- **Weekly:** short delivery update, blockers, decisions needed and next milestones.
- **Monthly:** performance review against agreed measures; explain what changed and what will be tested next.
- **Quarterly:** business review, outcome summary, roadmap and renewal/expansion discussion.
- **At project close:** handover, training, documentation, client feedback and a case-study permission request.

Client health score

Use a simple red/amber/green status based on delivery confidence, communication, outcome progress, payment status and stakeholder engagement. Escalate early when a client is unresponsive, approvals are delayed, scope is expanding or the agreed outcome is at risk.

10. AUTHORITY, PROOF AND BRAND STRATEGY

Social media should support sales and trust—not become the business strategy. XKWISIT's content should demonstrate how it thinks, how it diagnoses business problems and how it turns that diagnosis into measurable work.

Five authority assets to build

1. **Case studies:** publish the problem, starting position, work completed, timeframe, measurable result and limitations. Use client-approved data only.
2. **Sector insight briefs:** publish short research on one industry at a time—customer behaviour, conversion friction, digital maturity and practical opportunities.
3. **Business teardowns:** analyse a public customer journey or digital experience respectfully, explain the friction and propose a test. Do not disclose private data or present assumptions as verified facts.
4. **Founder / expert point of view:** explain business decisions, technology trade-offs, measurement and growth lessons. Avoid generic motivational content.
5. **Diagnostic tools:** create a website/conversion checklist, digital maturity scorecard or lead follow-up audit that attracts decision-makers with a relevant problem.

Channel roles

Channel	Primary purpose	Recommended use
Website	Trust and conversion hub	Clear offer pages, proof, diagnostic CTA, sector pages, contact route, privacy and terms.
LinkedIn	B2B authority and relationship building	Founder insights, case studies, targeted comments, decision-maker conversations and partner visibility.
Instagram	Visual proof and brand credibility	Selected project breakdowns, before/after where truthful, process explainers and short case-study clips.
Email	Nurture and relationship continuity	Monthly insight note, event follow-up, proposal follow-up and client education.
YouTube / webinars	Depth and searchable expertise	Practical walkthroughs, sector briefings and recorded educational sessions when there is enough substance.
WhatsApp Business	Direct conversation and client service	Qualified enquiries, appointment coordination and client updates—not indiscriminate mass messaging.

Content operating ratio

As a starting editorial mix, allocate roughly 40% to evidence and case studies, 30% to sector-specific insight, 20% to practical education and 10% to company updates. This is a planning hypothesis, not a universal algorithm rule. Review which content generates qualified conversations, not just reach.

Every public claim should be traceable. If XKWISIT says it improved conversion, reduced costs or increased revenue, retain the baseline, measurement method, timeframe and client permission behind the claim.

11. OPERATING MODEL, PEOPLE AND DELIVERY QUALITY

Growth can damage a services company if sales outpace delivery capacity. XKWISIT needs a lightweight operating system before aggressively increasing volume.

Function	Minimum operating responsibility
Commercial lead	ICP, pipeline, discovery, proposals, forecasting, pricing and partner relationships.
Strategy / research	Customer interviews, market analysis, diagnosis, measurement plan and recommendations.
Delivery lead / project manager	Scope, timeline, resource allocation, client communication, risk and acceptance.
Specialist delivery	Engineering, design, growth, AI/content and analytics execution against agreed standards.
Quality assurance	Review deliverables, test workflows, validate analytics, check accessibility/security where relevant and document sign-off.
Finance / administration	Invoicing, collections, project costs, tax/accounting coordination and contract records.

Core documents and systems

- CRM with standard stages, required fields, lead source and next-action dates.
- Proposal and statement-of-work templates with clear scope and change control.
- Project brief, delivery plan, risk log, QA checklist and client acceptance record.
- Time and cost tracking to understand project gross margin and capacity.
- Client onboarding, weekly update, monthly review and handover templates.
- Case-study evidence log with permission status and source of each metric.
- Data access, security, backup, confidentiality and retention procedures.

Capacity rule

Do not accept work solely because revenue is attractive. Check specialist availability, delivery complexity, cash-flow timing, dependencies and expected gross margin. If capacity is constrained, use a vetted specialist partner or schedule the work transparently rather than overcommitting.

12. 90-DAY EXECUTION ROADMAP

The first quarter should validate positioning, identify the best-paying segment, create proof-led offers and establish a measurable sales pipeline. It should not begin with a large advertising budget.

Period	Priority work	Evidence of completion
Days 1–15: Focus	Select two initial verticals; finalise positioning; define three offers; audit past leads and clients; set up CRM and project margin tracking.	ICP scorecards, offer one-pagers, baseline metrics, CRM stages and a list of 50 target accounts.
Days 16–30: Validate	Conduct 12–15 buyer interviews; review competitors; test three offer messages; build the Growth Diagnostic; collect client proof and permissions.	Interview notes, competitor matrix, offer test results, diagnostic template and first case study draft.
Days 31–45: Activate	Launch focused outbound; approach referral partners; publish two evidence-led assets; run a small sector briefing or clinic.	First outreach cohort, partner list, meeting records, content-to-lead tracking.
Days 46–60: Convert	Run discovery calls; sell paid diagnostics; issue scoped proposals; review objections and pricing; refine onboarding and delivery.	Qualified opportunities, diagnostic sales, proposals, documented loss reasons.
Days 61–75: Deliver and prove	Deliver initial engagements tightly; capture baseline and outcome data; request feedback; identify appropriate recurring work.	Accepted deliverables, margin reports, client feedback and outcome evidence.
Days 76–90: Decide and scale	Compare segment performance; review channel economics; double down on strongest offer; pause weak experiments; set next-quarter targets.	90-day review, segment decision, channel decision, revised forecast and next-quarter plan.

Weekly management cadence

- **Monday:** pipeline review, top opportunities, next actions, delivery capacity and cash collection.
- **Wednesday:** delivery risk review, client blockers, quality and scope changes.
- **Friday:** channel performance, meetings, proposals, wins/losses, project margin and lessons.
- **Month-end:** revenue collected versus invoiced, gross margin, client concentration, retention, pipeline coverage and strategic experiments.

90-day decision gates

Decision	Continue / expand when…	Pause / change when…
Segment	Buyers show urgent problems, access to budget and repeatable demand.	Interest is high but budgets, urgency or decision access remain weak.
Offer	Buyers understand it, pay for it and delivery creates measurable value.	Sales require extensive custom explanation or delivery repeatedly exceeds scope.
Channel	It creates qualified opportunities at an acceptable acquisition cost.	It produces vanity metrics or low-fit enquiries without progression.
Retainer	Clients have a recurring need and see ongoing value.	The retainer is only a disguised commitment to post content or remain available.

13. KPI DASHBOARD AND MANAGEMENT CADENCE

Measure the full commercial system. A dashboard should show both leading indicators (activity and pipeline) and lagging indicators (revenue, margin and retention).

Area	Metric	Definition / use
Market	Target-account coverage	Number of researched accounts that meet the chosen ICP.
Acquisition	Positive reply rate	Positive replies divided by personalised first contacts.
Acquisition	Qualified meeting rate	Qualified discovery meetings divided by engaged prospects or contacts, with denominator kept consistent.
Pipeline	Pipeline value by stage	Weighted and unweighted opportunity value; use realistic stage probabilities based on XKWISIT history once enough data exists.
Sales	Proposal win rate	Won proposals divided by decided proposals; do not count undecided proposals as losses.
Sales	Sales-cycle length	Days from qualified opportunity to signed agreement.
Economics	Average contract value	Average signed contract value by offer and segment.
Economics	Gross margin by project	Revenue less direct delivery costs, divided by revenue.
Cash	Collection rate / overdue receivables	Cash collected versus amounts due; track ageing.
Delivery	On-time milestone rate	Milestones completed by agreed date, excluding documented client-caused delays where appropriate.
Client	Repeat / expansion revenue	Revenue from existing clients, separately from new-client revenue.
Client	Client health / satisfaction	Structured feedback, unresolved issues and renewal likelihood.

Starter targets for the first 90 days

These are internal activity targets to create discipline, not forecasts of guaranteed sales.

Indicator	Starting target	Review
Buyer interviews	12–15	Complete by day 30
Target accounts researched	50 initially; then 30–40 per week	Weekly
Personalised first contacts	25–30 per week	Weekly
Partner conversations	2 per week	Weekly
Qualified discovery meetings	3–5 per week once outreach is active	Weekly
Offer experiments	3 in first 30 days	Day 30
Case studies	At least 1 evidence-backed case study by day 60, if client permission and data exist	Day 60
Commercial review	Revenue, gross margin, collections, pipeline and win/loss review	Monthly

Do not set a revenue target without knowing the current average contract value, delivery capacity, margin and cash collection cycle. Establish those baselines first, then build a forecast from real conversion data.

14. ILLUSTRATIVE COMMERCIAL MODEL

The table below is a planning model, not a statement of XKWISIT's current pricing or a market rate card. Replace every assumption with actual costs, buyer feedback and signed contract data before using it for budgeting.

Revenue stream	Commercial structure	Why it matters
Paid diagnostic	Fixed fee, fixed scope, short delivery window.	Qualifies serious buyers and funds strategy work.
Implementation project	Milestone-based fixed fee or scoped time-and-materials.	Generates project revenue while controlling scope and cash flow.
Monthly optimisation	Monthly retainer tied to agreed deliverables and review measures.	Creates continuity where ongoing work is genuinely needed.
Product support	Support tier with defined response windows and included hours.	Provides predictable support revenue and clear service boundaries.
Training / workshops	Per-session or cohort fee.	Monetises expertise and can create qualified follow-on opportunities.

Illustrative monthly scenario builder

Assumption	Conservative example	Growth example
New implementation projects	1 × ■1,000,000	2 × ■1,500,000
Active retainers	2 × ■250,000	4 × ■350,000
Diagnostics / workshops	2 × ■150,000	3 × ■200,000
Illustrative monthly revenue	■1,800,000	■5,300,000

These figures are hypothetical arithmetic examples only. They are not recommended prices, expected sales, or evidence of market willingness to pay. They exclude taxes, direct delivery costs, overhead, discounts, bad debt, refunds and timing differences between invoicing and cash collection.

Pricing method

1. Estimate direct labour and supplier costs for each scope.
2. Add project management, quality assurance, contingency and overhead allocation.
3. Set a minimum acceptable gross margin and calculate a price floor.
4. Compare the price with the value and risk of the business problem—not only with competitors' cheapest offers.
5. Validate willingness to pay through buyer interviews and paid pilots.
6. Review actual margin after delivery and update estimates using actual hours and rework.

15. RISKS, ASSUMPTIONS AND VALIDATION PLAN

Risk / assumption	Why it matters	Control
Generalist positioning	Can reduce differentiation and increase price pressure.	Use segment-specific landing pages and a small number of outcome-led offers.
Low-budget microbusiness demand	High enquiry volume may not translate into profitable engagements.	Qualify budget early; provide a separate, tightly scoped entry product only if delivery economics work.
Overpromising outcomes	Revenue and growth depend on factors outside XKWISIT's control.	Contract for deliverables and measurement; state assumptions and dependencies.
Founder bottleneck	Sales, strategy and delivery may all depend on one person.	Document processes, delegate delivery ownership and use specialist partners.
Poor project economics	Revenue can rise while cash and profit deteriorate.	Track project margin, collections, utilisation and scope changes.
Weak evidence	Claims without proof can damage trust and conversion.	Create a proof register and secure client permission for every public case study.
AI hype without business case	AI projects may be hard to justify or maintain.	Only recommend AI when workflow, data, risk, ROI hypothesis and human oversight are clear.
Client concentration	One client can dominate cash flow and capacity.	Track revenue concentration and build a diversified pipeline.
Data and privacy exposure	Client systems may contain personal or confidential information.	Use access controls, least privilege, documented retention and appropriate contracts.

Assumptions that need confirmation

- Current team size, specialist availability and delivery capacity.
- Current revenue, average contract value, gross margin and cash collection cycle.
- Existing client list, strongest sectors, case studies and references.
- Current website, CRM, proposal process and lead sources.
- Whether XKWISIT intends to prioritise Nigeria first, or pursue international clients in parallel.
- Any legal, tax, data-protection, procurement or sector-specific requirements for target engagements.

The next level of research

A second research phase should use XKWISIT's own records to calculate the true obtainable market: segment-level lead volume, budget fit, sales-cycle length, win rate, delivery cost and retention. Public reports can identify market context; only customer and operating data can determine which segment is commercially attractive to this specific company.

16. SOURCES AND RESEARCH NOTES

The sources below inform the market context in this strategy. Statistics are reproduced with their original scope and caveats where available. They should be rechecked before being used in external investor, client or procurement materials.

1. PwC Nigeria — MSME Survey 2024: Building resilience: Strategies for MSME success in a changing landscape.
Survey description: 557 MSME operators, 13 sectors, 29 states; online fieldwork in 2022. The report summarises the role of MSMEs and digital adoption.
https://www.pwc.com/ng/en/publications/strategies-for-msme-success.html

2. PwC Nigeria — MSME Survey 2024, digital channel use.
Technology use among surveyed MSMEs included WhatsApp Business (23%), Facebook (19%), Instagram (15%), email marketing (10%), Twitter/X (9%) and online store (7%).
https://www.pwc.com/ng/en/assets/pdf/2024-pwc-msme-survey-report.pdf

3. DataReportal — Digital 2026: Nigeria.
Reports 109 million internet users and 47.8 million social media user identities at end-2025; cautions that social media identities may not represent unique individuals.
https://datareportal.com/reports/digital-2026-nigeria

4. Nigerian Investment Promotion Commission — Information & Communication Technology.
Provides an overview of Nigeria's ICT sector, including digital services, cloud, e-commerce, fintech and AI/data opportunities. Treat forward-looking sector statements as institutional context, not an XKWISIT sales forecast.
https://nipc.gov.ng/sectors/ict

5. World Bank — Nigeria MSME market characteristics.
Discusses the structure of the MSME market, including the dominance of micro-enterprises and constraints around formalisation and finance.
World Bank document (PDF)

6. GSMA — E-commerce in Nigeria: Unleashing the opportunity for MSMEs.
Summarises findings from a survey of 250 Nigerian MSMEs already using e-commerce, including reported sales and cost changes and the role of social platforms.
GSMA resource

Methodology and confidence

This document combines published secondary research, the known XKWISIT service structure and strategic analysis. It does not include live interviews with XKWISIT customers, verified internal financials, a complete competitor pricing audit or a statistically representative survey of prospective buyers. Recommendations are therefore prioritised hypotheses, not verified predictions. The 90-day plan is designed to close these evidence gaps.
